

Year 2022, the war in Ukraine was added to Covid 19, to the inexistence of interactive physical defenses suitable for the environment and the human body.

With this article, I reach the coveted milestone of 100 unwanted articles from world power centers, published on my website (<https://spawhe.eu>). I do NOT know if I will write more because my vision is fading due to the disease called cataract.

The problems mentioned in the title of this article have no culprits. This means that the entire earthly society is guilty.

I refer, in particular, to the crimes of omission of world public and private science that led us to this paradoxical situation in the year 2022. In other words, the common people of the earthly world people cannot defend themselves against the bullying of larger neighboring countries, such as Russia, China, America, which impose their policy and development model. What is worse is the fact that the development models they impose differ only for political reasons, while the defects mentioned in the title are common to the entire world population. Paradoxically, environmental policies and industrial patents have excluded interactive physics all over the world, which for myself is simpler and more important than quantum physics. Suffice it to think that this physics includes the principle of PASCAL, of HENRY and DALTON, that of TORRICELLI, and that of the IMPENETRABILITY OF BODIES, which

alone, as I have explained in many articles and patent deposits, applied simultaneously, to the terrestrial environment, could solve all the problems of our time: economic, environmental, energy, public health, and land and air space transport, extracting without transformation costs, energy from the terrestrial environment SIMPLY SELECTING EXISTING TECHNOLOGIES BETTER. Equally paradoxically, without using interactive principles, we cannot even defend ourselves from old age and from viruses that attack humans at the pulmonary, neurological level. In fact, interactive inventions are considered inconvenient for the large countries that dominate the world economy. Nobody finances them and nobody opposes them because there are no impartial scientific consultants, able to think globally in the general interests. Why don't these consultants exist? IT IS THE Fault OF SPECIALIZATIONS AND LACK OF KNOWLEDGE OF THE "GLOBAL SCIENTIFIC WORKING ORGANIZATION" which would always require the application of the most economical solution, known to the state of the art, in all the work cycles and transformation of the material. THIS MEANS THAT THE BEST SOLUTION DOES NOT EXIST. IT IS ALWAYS THE ONE THAT MUST BE REALIZED BY GLOBALLY UPDATING THE STATE OF THE ART EVERY DAY. Paradoxically, to myself, the seventy-three year old inventor of interactive environmental and energetic inventions, as well as of the "Artificial heart oxygenator of the energetically autonomous blood", new diseases have been diagnosed in addition to the previous ones. I am referring to diseases, which in my opinion as a patient, are partially aggravated by the Covid 19 pandemic and the side effects of vaccines. In fact, the same diseases, even if they were latent, were asymptomatic before the appearance of the virus: "Chronic degenerative encephalopathy on a vascular basis. Interstitial lung disease. Diverticulosis of the colon with previous resection of the same colon. Chronic gastritis. Chronic Colicist Litiasica. Pancreatic cyst. Uninodular goiter. Right adrenal adenoma. Chronic HBV liver disease. Type 2 diabetes mellitus. Arterial hypertension with cardiac arrhythmia. Weight loss of 20 kg in

the last five years, of which 15, in the period of the Covid pandemic, although, never tested positive for diagnosis tests, in compliance with Pfizer vaccinations. I will not undergo the fourth dose of the vaccine so as not to further aggravate my state of health.

The question I ask myself is the following: how many of these diseases could be cured, eliminated or reduced, if instead of the natural heart we had an artificial heart capable of sending oxygenated blood and medicines in liquid form to the diseased organs? And how many diseased organs in the joints could be motorized with small actuators and electric motors powered directly by the blood circulation? In fact, we may need to have more artificial hearts instead of the current heart that would occupy the spaces currently occupied by sick and aged organs, both to better purify the blood and to produce a greater amount of energy.

THIS IS NOT SCIENCE FICTION, SIMPLE SCIENTIFIC ORGANIZATION OF MULTI-DISCIPLINARY WORK. Everything that is made of large dimensions can be miniaturized and if we are able to produce energy locally (including in the human body) we can also enhance man's defenses and extend human life.

THIS IS NOT POSSIBLE TO DO UNTIL WE ARE GOVERNED WORLDWIDE BY IGNORANT PEOPLE WHO STILL BELIEVE IN SCIENTIST-SUPPORTED WEAPONS THAT DO NOT LOOK BEYOND THEIR SPECIFIC SKILLS.

When I started being an inventor as a retiree, in 2006, I only suffered from diabetes and hypertension. I do not regret having done this job, especially because it is misunderstood by governments and multinationals. If I had not proposed my forty simple and strategic SPAWHE inventions, which would be and are sufficient to create an alternative, more efficient, economical and healthy development model while using the same current technologies. TO GIVE AN EXAMPLE, IF A MACHINE WORKS SIMPLY BY INSERTING A PLUG IN A POWER SOCKET, IT DOES NOT MEAN THAT THE MACHINE WORKS CORRECTLY IF THE CURRENT HAS BEEN

PRODUCED A POLLUTING OR ANTI-ECONOMIC ENERGY SOURCE. THIS IS TRUE FOR ALL LAND MACHINES AND MOSTLY THOSE WHICH NEED NO POWER SOCKET. AS EXPLAINED IN THE FOLLOWING ROW OF SPAWHE:

“I am not an academic, but a former system designer and installer. I do not allow myself to criticize the solutions of talented scientific specialists. I limit myself only to publishing my solutions based on my experience which are based on the scientific organization of multi-disciplinary applied work which is clearly unknown to the academic world. While many of the solutions described by academic specialists are correct, for me, the glue that should coherently hold them together is missing. Which is only described in the following nursery rhyme from spawhe.eu:

“ The cleaning of fossil energy published in spawhe, to be efficient, should be based, above all on inorganic chemistry that is able to absorb CO₂, producing carbonates in the water, so that they counteract the acidification of the oceans and global warming. To speed up the processes and reduce the energy costs that would have involved the circulation of very large quantities of water necessary to neutralize the very large quantities of CO₂ emitted by the current thermal power plants and heat engines, it has gradually been transformed technologically into solutions of less space by exploiting the principles Pascal and Henry. In fact, I realized that on planet Earth, all the activities that nature produces through organic and inorganic chemistry, photosynthesis and the carbon cycle can be increased in speed without any need to use thermal, nuclear energy and current renewables. It is sufficient only to increase the operating pressures of the systems, modify the circulation pumps and make the machines work differently. In fact, natural interactive systems expel, with the times required by nature, the elements extraneous to natural cycles, due to accidental polluting phenomena, including direct and indirect thermal effects due to volcanic explosions, to natural fires that have always existed on the

planet. The current industrial activities of men have multiplied exponentially the elements extraneous to natural cycles, therefore nature is no longer able to restore interactive balances. Obviously, this is my truth and in the entire website, I explain how, in my opinion, we should have created global plants that purify both fumes and water at the same time before they go to pollute the soils, rivers, lakes and seas. Having not done this in any country in the world, it has not been possible to advance the state of the art of purification to make it known to other countries. Therefore, the advancement of the state of the global purification art has not occurred. Consequently, it was not even possible to notice that the water circulation pumps, if we make them work in the direction of gravitational force, by placing them in series with the turbines, we could extract the energy directly from the environment. Having not done this, it was not possible to realize that the water circulation pumps, if in addition to making them pump in the direction of gravitational force, we modify them on the suction side and make them another inlet clearly separated from the main one up to the same impeller, we can always use the same water to create energy because we use one feed to recycle the water from the upper basin and the other feed to introduce into the same impeller the water discharged from a turbine fed by falling water from the same upper basin. Not having done this, it was not possible to think that by replacing the upper basin with a pressurized autoclave with compressed air, it being understood that we use a turbine connected to the outlet of the autoclave, we can recover the water drained from the turbine and insert it back into the autoclave, whose pressurized water is recycled with the same impeller of the pump by means of the second supply. In this way, with the same water and the same compressed air, we would have produced a current generator that extracts energy from the environment, with quite small dimensions. Having not done this, it was not possible to further reduce the dimensions of this current generator by increasing the operating pressure of the autoclave in order to

be able to mount it on cars and trucks, on agricultural tractors. Not having done this, it was not possible to think that the overall dimensions can still be reduced by using submersible pumps as turbines mounted directly in cylindrical tubes that would act as autoclaves. Therefore, these groups could be used to be inserted directly into the wells to raise the water and at the same time oxygenate the aquifers which today are polluted by agricultural fertilizers, herbicides and pesticides and fecal coliforms. In fact, we know that part of the air that pressurizes the autoclave dissolves in the water according to Henry's principle, purifying the water for free. Not having done this, it was not possible to think that the overall dimensions could be reduced even further. Even miniaturized and instead of purifying the water from the wells we could purify the human blood, placing two small autoclaves side by side that would replace the right and left ventricles, creating energetically autonomous artificial hearts that would feed the systemic circuit that oxygenates the brain and the lungs to lengthen the life of the 'man. Having not done this, it was not possible to think that pressurized cylindrical autoclaves can be incorporated an external cylinders containing water at atmospheric pressure, outside of which sliding tracks of permanent magnets mounted on transmission chains driven by motors can be made electric at variable revolutions that would produce an electromagnetic flux of variable intensity which would produce induced currents in a solenoid outside the same water tank. Therefore, we could produce in this tank a linear electromagnetic thrust force according to Lorentz's law at the ambient temperature, without fuel that could be added to the reaction thrust of Newton that would be produced by propellers driven by electric motors always commanded by generators. of current that produce the primary hydroelectric energy, fed by submersible pumps used as turbines placed inside the central reservoirs. Not having done this, it was not possible to replace the current thermal turbofans of aircraft to travel in the atmosphere and in space with energy extracted directly from the environment, it was

not possible to create flying cars, nor submarines that move with the same system without fuel. It was not possible to make the ships travel without fuel, nor to mount the same system to make mobile barriers in the sea to defend ourselves from high waters. It was not even possible to think that in the space travel of the future we can add to the global linear motors an external steel tunnel connected to the turbo fan, where it will produce a higher vacuum higher than the surrounding space vacuum and connect this tunnel with a small vacuum pump to a thickening tank of the captured powders, which will be emptied periodically letting in the atmospheric air which will feed an electrostatic filter that will recover the powders that will be used together with the other interactive purification and energy plant inventions described on the website <https://www.spawhe.eu> to make humans survive even in space without suffering physiological damage due to the absence of atmospheric pressure, gravity, food resources and raw materials to build spare parts for the machines necessary for survival in space. In fact, atmospheric air and water will fill the space caravan wagons full of human beings and will be endlessly recycled, suitably replenished with artificial photosynthesis and carbon cycle, while general gravity will be reinforced, becoming very similar to the terrestrial one, electrostatically polarizing the paths of atmospheric conditioned air and recycled water in the interactive, energy and purification, compressed hydroelectromagnetic plants, still unknown to terrestrial science. Current science has forgotten that the primary fluid dynamic energy is produced by the flow rate for the pressure and density of the fluid itself. Therefore, the best solution to produce clean energy at low cost and in infinite quantities is: to use compressed air as an energy source (which is not consumed) and water as an energy carrier (which with the use of new pumps with separate double power supply up to the impeller, can recycle it indefinitely by exploiting the maximum pressure of the compressed air and the maximum density of the water at the same time. In the simple formula of fluid

dynamic energy mentioned above, no heat source is needed. This is the biggest mistake in world science and nobody wants to correct it.”

Medical science could not arrive at the conception of the artificial heart by itself if the interactive purification systems were not invented first. For the simple fact that such systems already exist in nature but work with only atmospheric pressure and gravitational force. ONLY AN ACCURATE STUDY OF THE ANTHROPIC PLANTS COULD ALLOW INCREASING THE WORKING PRESSURES AND ENHANCING THE ENERGY AND PURIFYING EFFECTS LOCALLY.

If this has never been done in the current anthropogenic facilities, how could medical science invent the artificial heart oxygenating the blood autonomously energetically? WE HAVE SPENT THOUSANDS OF BILLIONS TO BUILD DAMS AND BASINS IN THE MOUNTAIN VALLEYS ONLY FOR THE PURPOSE OF PRODUCING HYDROELECTRIC ENERGY, WHILE IT WOULD HAVE BEEN MORE LOGICAL AND ECONOMOMICAL TO MANAGE THE WATERS IN THE ODRIVE BASINS IN THE VALLEY, WHERE THE UGAGUE WILDLIFE IS ‘ENERGY BUT PURIFYING THE WATER AND RECYCLING IT TO INFINITY. THE WORLD TOP OF EXPERTS WHO DO NOT UNDERSTAND THESE ELEMENTARY THINGS ARE RIDICULOUS.

Think of Einstein’s theory of gravity and Frederic Taylor’s scientific organization of work and of public interventions in Keynes’s economics of labor. Unfortunately, these theories have remained distinctly separate from the global business world because gravitational force has not entered the study of human activities. Until now, the scientific organization of work has been applied only to industrial work and public aid has been limited to supporting unemployment without scientifically intervening to improve technological solutions by exploiting interactive principles.

BECOMING MASTER OF FACEBOOK, TWITTER, ŞKYPE, OF THE WORLD TRANSPORT INDUSTRY, OF HUMAN TRANSPLANT SURGERY, WITHOUT

OWNING THE TECHNOLOGY THAT ALLOWS TO MAKE THESE GREAT INVENTIONS SUSTAINABLE IS LIKE BUILDING GREAT SABBIAN CASTLES.

Why does the International Court of Justice not investigate the crimes of omission of world sciences and technologies that neglect the interactive fluid dynamics fundamental principles of Pascal, Henry, and the impenetrability of bodies, which would make current scientific and technological development sustainable for the entire world population? Haven't the current separations of competences done enough damage to the environment and humans?

Protected and protector states demonstrate the failure of the United Nations and world development policy. Sending weapons to Ukraine to counter Russian aggression is a big mistake. Better to isolate the aggressor country from a commercial point of view and demonstrate that an alternative development model without weapons, gas and oil is possible. This is SPAWHE.eu. All guilty, no guilty, including the Church which instead of limiting itself to praying and enriching the cathedrals with works of art should finance the prototypes demonstrating an alternative development model. In fact, if no one finances peaceful impartial inventions, it is not possible to identify the triggering principles of interactive systems that are not commercial since they are already inserted in natural systems.

It is no coincidence that Blaise Pascal and Giovanni Battista Venturi who legislated very important fluid-dynamic physical principles were Catholic priests. It is no coincidence that the undersigned could not have conceived the purification and energy system without their laws, obviously coupled with Henry's law, the principle of impenetrability of bodies and a good practical knowledge of the operation of pumps and turbines.

"I LEAVE THE READERS JUDGE IF IT IS TRUE OR NOT TRUE THAT THE ARTIFICIAL HEART OXYGENATING THE BLOOD COULD REINFORCE HUMAN

DEFENSES. I INVITE YOU TO ALSO READ the following
